Solution Architecture

Solution architecture for *Automated Data Import and Relationship Mapping using Import Sets & Dot Walking* is a structured process that bridges business data challenges with efficient ServiceNow-based solutions. Its goals are to:

● Identify the best approach using Import Sets, Transform Maps, and Dot Walking to automate bulk data import and relationship mapping.
● Describe the system structure, including staging tables, transformation processes, target tables, and data relationships for stakeholders.
● Define key features such as automated import, data validation, reference mapping, and reporting, along with development phases.
● Provide clear specifications for implementing, managing, and maintaining accurate and scalable data integration within ServiceNow.
